

Kometa Double Storm - Outdoor protective enclosure

Kometa Double Storm - Outdoor protective enclosure

P/N: 23690

The Kometa Double was developed to provide a custom-tailored outdoor protective enclosure for the EPSON EB-PU2030 and PU2220 projector series, as well as similar models.

This product completes the final link in Euromet's comprehensive and integrated range of mounting solutions for this professional projector family, which sits at the very core of our business. Specifically designed for these projectors, the enclosure is fully compatible with the new MATRIX cages—innovative modular frames engineered for flawless rental and museum installations.

Engineered to meet the fast-paced and practical demands of the rental market, this enclosure introduces several innovative features:

- Flight-case style architecture: allowing the system to be pre-assembled and configured directly in the warehouse, then transported to the venue with the cages and projectors already securely mounted.
- Dual MATRIX cage integration: supporting setup with two separate cages.
- Streamlined stacking: enabling effortless stacking of two projectors inside the enclosure.

Finally, the STORM model designation indicates that the enclosure is fully rated for outdoor deployment, equipped with integrated heating and cooling systems.

Specifiche
