
Projector mount with micrometric calibration - BS26K

Projector mount with micrometric calibration - BS26K

P/N: 29800

The BS26K is a 3-axis micrometric calibration bracket designed for securing professional projectors to ceilings or trusses, capable of achieving zero clearance from the mounting surface. This Euromet-patented support eliminates the distance between the projector and the ceiling or truss, thereby minimizing the projection line on the wall.

Thanks to Euromet's patented mounting system, it is possible to eliminate the gap between the projector chassis and the supporting structure (ceiling/truss). This structural design minimises the vertical offset and the optical axis relative to the wall, optimising the projection beam. This feature is essential for precise geometric alignment in complex multimedia installations and immersive projection applications.

Color Black

The mount is compatible with the following projectors: PQ2220 and similar models, PU1008 and similar models.

Specifiche

Installation	Support system to the ceiling
Mode	Landscape
Material	Iron - Aluminum
Treatments	Powder coated
Color	Black
Pitch	+/- 8°
Roll	+/- 8°
Minimum distance	0
clamp fixing screw	M10
standard attachment	YES
